no	Add to all		restaurant_review_add	menu_item_review_add		restaurant_review_add	restaurant_cuisine_add
yes	Add many-to-many (at least 1)						restaurant_cuisine_add
yes	Remove many-to-many (at least 1)						restaurant_cuisine_add
maybe	Remove one-to-many (at least 1)				menu_item_review_add[6]		

Questions/Comments:

- [1] There is no matching DELETE query to the button on this page
[2] There is no matching SELECT query to populate table on this page
[3] There is no matching SELECT query to populate table on this page
[4] There is no matching DELETE query for the delete button on this page
[5] There is no matching UPDATE query for the update button on this page

[6] This is confusing. Does this update only allow you to remove the visit ID? Also it is like you are trying to use an UPDATE in place of a DELETE. You could delete a visit and leave the review with foreign key constraints specically upon delete of visit set null visit id.
[7] There is no matching DELETE query for the delete button on this page
[8] There is no matching SELECT query to populate table on this page
[9] There is no matching UPDATE query for the update button on this page
[10] There is no matching DELETE query to the button on this page
[11] There is no matching SELECT query to populate table on this page
[12] There is no matching UPDATE query for the update button on this page
[13] There is no matching DELETE query to the button on this page
[14] There is no matching SELECT query to populate table on this page
[15] Query exists but nothing on html pages match it
[16] Query exists but nothing on html pages match it
[17] Query exists but nothing on html pages match it; Maybe you're trying to use the restaurant review page to add this? I cannot tell
[18] Query exists but nothing on html pages match it
